WHY EU-REKA?

Do you know?

1. According to the Census of India, the rural literacy rate stands at just 69 percent, whereas urban literacy rate has reached about 85 percent. For inclusiveness, this disparity between urban and rural literacy level needs to be narrowed.

2. In India, over 30% of girl students drop out of schools by the time they get to class IX and this number rises to 57% in class XI. There is a need to reduce the High dropout rate among girl students, thus promoting gender equality. 'If you educate a man, you educate an individual, however, if you educate a woman, you educate a whole family'.

3. Average age of an Indian is 29 years, compared to 37 for China and 48 for Japan. This emphasises the need to empower the younger generation and there can be no better way than through better education. In this technological era, higher S & T education is very important for growth of our country.

4. Youth in colleges have a responsibility towards the endogenous growth of the country; and the best way is to share their knowledge and motivate the youngsters in the schools to take up higher education in Science and Technology
